

Ghaida Alshiddi

Assignment 1

CS 4395

February 4th, 2023

### Overview

This program runs the file data.csv and organizes the data and stores them in a new pickle file. The program also asks the users to make some adjustments to their data when needed.

To run the program, the user needs to include this command in the parameter or terminal: data/data.csv

Strengths and weaknesses:

I believe that Python is very good at text processing, as it is better than other programming languages that I am familiar with at text processing. For example, Python has many good functionalities that makes it easier for programmers to code and write good programs. The only weakness is that I think the code could look vague at first.

For this assignment: I learned how to use nltk and how to create classes in Python. I also learned how to deal with class objects and how to create a dictionary.
